1800 HLA sensitization in ventricular assist device recipients: Does type of device make a difference?

Ganesh S. Kumpati, MD, Daniel J. Cook, PhD, Eugene H. Blackstone, MD, Jeevanantham Rajeswaran, MSc, Ashraf S. Abdo, MBBS, James B. Young, MD, Randall C. Starling, MD, MPH, Nicholas G. Smedira, MD, and Patrick M. McCarthy, MD, Cleveland, Ohio

HLA sensitization during implantable ventricular assist device support increases rapidly after device insertion and then decreases. This temporal pattern of sensitization is influenced by patient factors and not by type of device.

Brief Communications

1808 Successful treatment of a Stanford type A dissection by percutaneous placement of a covered stent graft in the ascending aorta

Kai Ihnken, MD, Daniel Sze, MD, PhD, Michael D. Dake, MD, Dominik Fleischmann, MD, Pieter Van Der Starre, MD, PhD, and Robert Robbins, MD, Stanford, Calif
